PES University – Department of CSE
Lab 1: Requirements Engineering & UML Use-Case Modelling

Use-Case Flow Specification

UC-06 – Cast Vote

Context

The project is Student Project Portfolio & Showcase App. The system is used for an annual project expo where student teams submit project portfolios and multimedia artifacts, panel judges evaluate projects using digital rubrics, and the public participates in voting with strict anti-Sybil protections.

Use Case Information

Use Case ID: UC-06

Use Case Name: Cast Vote

Primary Actor: Public User

Preconditions

1. The project showcase is open for voting.
2. The selected project is available in the showcase.
3. The public user has access to the voting interface.

Postconditions

1. The valid vote is recorded.
2. The project's vote count is updated.
3. The leaderboard reflects the updated vote count.

Main Success Scenario

1. Public User opens the project showcase.
2. System displays the available projects.
3. Public User selects a project.
4. System displays the selected project's showcase profile.
5. Public User selects Vote.
6. System performs voter verification.
7. System confirms that the voter is eligible and has not already voted.
8. System records the vote.
9. System updates the project's vote count.
10. System updates the leaderboard.
11. System displays a vote confirmation message.
12. Use case ends successfully.

Alternate Flow — Voter Verification Fails

6a. Voter verification fails

1. System detects that the voting identity is invalid, duplicated, or suspicious.
2. System does not record the vote.
3. System displays a message indicating that the vote could not be accepted.
4. The project vote count remains unchanged.
5. Use case ends without recording the vote.
